

Maths in my workplace

'Maths in my workplace' is a work-based programme, which starts with a welcoming taster session. If you don't have a Level 2 maths qualification, we'll work with you to identify the numeracy skills you need.

You'll gain skills to recognise new ways to improve productivity and time management, and use numbers with confidence in the workplace via a combination of face-to-face and digital learning, either 1-2-1 or in a group.

As your ability with numbers and confidence grows, you can progress to other numeracy qualifications.

Gain numeracy skills for a range of sectors:

Construction - weights, measurements, ratios, areas, perimeter, volume, distance etc.

Care - weights, height, record keeping, fractions/decimals/percentages, using excel to record patient data etc.

Catering - converting measurements, ratios of ingredients, scaling recipes, time and temperature conversions etc.

Retail - record keeping, cash handling, calculating change, working out percentage or fraction discounts, sizes etc.

Our sessions are structured yet fun

We'll work together to boost your teams' skills and confidence

Boost productivity of your workforce

FREE
refreshments
& healthy snacks
